

6050HA

E-Z Weld Hot Air Plastic Welder

Urethane Supply Company's 6050HA E-Z Weld Hot Air Plastic Welder is ideal for making quality welds to virtually any type of thermoplastic. The 6050HA uses a stream of hot air to melt the plastic welding rod with the substrate.

Benefits:

- Temperature control allows higher quality welds. By using the correct temperature, the same welder can be used on different plastics.
- **New built-in pressure regulator** for improved durability. Now you can control the airflow for more precise welding.

- Includes seven types of standard welding rod.
- Works very quickly when welding long beads on a known type of plastic.

Application:

- A 110V power source is needed.
- Direct air supply with 80 to 200 psi. The built in restrictor does the rest.

6050HA E-Z Weld	
Dimensions:	19" x 7" x 7" (48cm x 17cm x 17cm)
Weight:	11.0 lb. (5 kg.)
Element:	550 watt
Voltage:	110V
Air:	80 to 200 psi
Temperature:	Up to 1060 F
