

E-Z Weld Model 2.0

P/N: 6053

Hot Air Welder

Urethane Supply Company's E-Z Weld Model 2.0 Hot Air Welder is an efficient, high quality tool for quickly making strong, cost effective repairs to all types of automotive thermoplastics. It's the perfect tool for anyone who wants to maximize profits by reducing the amount of time spent on a plastic repair.

The Model 2.0 welder replaces the 6050HA welder and features several significant upgrades. A precision rolled diaphragm air regulator has been added to provide accurate, creep-free airflow control at all pressures required for plastic welding. This allows the operator to make faster, consistent high quality welds while keeping adjustments to the welder at a minimum.

A "push-on" temperature control switch has been added so temperature adjustment and repeatability are simple to achieve. The unit also features a sturdy metal control box, a new heavy-duty welding stand and a wide selection of plastic welding rod. The 550W element allows welding at temperatures up to 1060°F. Made in the USA

Benefits:

- Top quality components.
- Simple to operate.
- Precise control over air temperature and air flow produce better, consistent quality welds.
- Heavy-duty surface mountable welder stand that holds up to abuse.
- Sturdy control box.
- 100% Made in USA!

Application:

- Connect a 60 to 100 psi air supply & 120V power source to the control box.
- Turn on air supply, then press the control knob and set the desired temperature on controller.
- In about 60 seconds, you are ready to weld!
- Shut down: Turn up the air then switch off heater by pushing in the control knob. When the temperature of the air at the tip is cold, it is safe to turn off the air.
